How to Help Your Children Succeed in School-Christian Bernard ILOGA 2020-06-13 Mentoring pupils or students very often proves to be an arduous task even for the most initiated. This guide is intended for parents, teachers and trainers who want to see the academic performance of the learners in their care improve. Indeed, enrolling a child in school or even teaching him/her new notions is not enough for him/her to learn; it is also necessary that adequate follow-up accompanies the learner in the learning process in order to avoid problems of boredom, discouragement, indiscipline and especially dropping out (dropping out) of school. You will find useful information on the functioning of the brain and the memorization process, explanations on the origin of learning difficulties and methods of resilience. Bibliographical references are found at the end of the document. If reforms are desirable on the institutional level of the organisation of studies, the involvement of the coach/trainer, whatever the system in place, is essential. The latter has more power than he sometimes believes to help improve the learner's academic performance.

Self-Help Groups for Parents of Children with Intractable Diseases-Tomofumi Oka 2003-09 The purpose of this dissertation is to examine the organisational problems, and in particular the leadership problems, of self-help groups in Japan for parents whose children have intractable diseases. Since 1993, I have been involved with these parent groups, and have conducted three sorts of qualitative interview: thirteen informal conversational interviews, four focus group interviews, and fourteen guided interviews, involving the members of twenty-one parent groups. Part of the research was carried out as participatory action research in which a research team was formed and authorised by the parent groups. My findings have shown that the groups' most serious problems lay not outside their groups but within, with the shortage of suitable leaders who volunteered in the activities. Three different sorts of account were given concerning the leadership shortage. They included justification, accusation and exposure: the participants claimed that taking care of ill children caused the leadership shortage; selfish members created it; or the determination of older leaders to remain at the helm prevented new members from becoming leaders. Cognitive maps have been drawn of these situations. I have explained the theories behind the free-rider and social loafing problems, and the leadership traps confronting the parent groups, and have applied attribution theory to the results. I have discussed the practicality of consultation for group leaders, and argued that organisational socialisation should be activated in the parent groups while propounding the island-within-a-lake model of parent groups. Methodologically, I have discussed social research within Japanese culture and the ethical issues pertain to participatory action research.

Healing Your Child's Brain-Matthew Newell 2021-02-09 Diagnosis is not destiny. Autism. ADHD. Learning difficulties. Epilepsy. Cerebral palsy. Traumatic brain injury. From the moment your child is diagnosed with a special needs condition, you are plunged into a world of doctors, specialists, and therapists. But the most important person on your child's care team is you. In *Healing Your Child's Brain*, child development experts Matthew and Carol Newell arm parents with the knowledge, confidence, and tools they need to help their special-needs child flourish. The Newells have treated more than 20,000 children and are the parents of two special needs children. They know firsthand, as both parents and practitioners, what works—and what doesn't. Most treatments focus on managing symptoms but don't address underlying neurological issues. This book guides readers through the stages of brain development and how they affect functioning, showing what wellness looks like at each level and how to identify—and tackle—problems. In these pages, parents will learn:

- The seven key developmental areas that contribute to how well your child functions in daily life.
- How to evaluate your child's capabilities and challenges.
- How to create an environment tailored to your unique child, meeting them where they are, rather than where they are "supposed" to be.

With insight into how your child's unique brain functions, you can move beyond managing symptoms to establishing a home regimen that fosters neurological growth. It is possible to transform the structure of your child's brain—from the cells themselves to the connections between them. By harnessing the brain's ability to grow and change slowly and steadily over time, your child can and will make progress.

Expressions for Life-

The Kindergarten for Teachers and Parents- 1889

Success Against The Odds-Paul Hamlyn 2003-10-04 *Success Against the Odds* is an exciting book about effective schools in disadvantaged areas, written for a wide audience. The findings will be invaluable to headteachers, teachers, governors in all schools, and will also be of great interest to parents and indeed all those who are concerned about the future of our schools and our children. The best-selling report of the National Commission on Education, *Learning to Succeed*, published in 1993, achieved widespread attention, acclaim and influence. *Success Against the Odds* will do the same. This powerful new book picks up one of the key themes of its predecessor, namely how schools in disadvantaged areas can not only be particularly effective but can continue to improve. A dozen teams have undertaken to investigate a school which can be described as 'succeeding against the odds'. Each team includes: * a leading educationalist, providing knowledge about effective teaching and learning and expertise in school improvement; * someone from the business world, offering a fresh insight into the successful management of the school as an organisation, and its interaction with the world of work; * someone working in the regeneration of deprived areas, providing a perspective that places education not in isolation, but as an interdependent part of the life of a local community The teams have visited a range of successful schools in disadvantaged areas to identify and analyse the key features of their effectiveness, or of their improvement. The schools between them cover a broad spectrum: primary, secondary and special; inner city, town and rural; local education authority maintained, voluntary and grant-maintained. What all the schools have in common is proven experience of overcoming difficult circumstances. In the case of each school, in-depth investigations of the life and work of the school have taken place, and the teams have attempted to explain the success of these schools. Some are detailed accounts of the life and work of the school, drawing on the views of pupils, parents and teachers to show what lies behind the consistent effectiveness of the school. Others are stories of schools that were 'turned round' from being failing schools to being schools on a long-term improvement path. In the concluding chapter, the National Commission on Education show that all schools have lessons to learn from these schools.

The Very, Very Rich and How They Got That Way (Harriman Classics)-Max Gunther 2021-09-07 Max Gunther's classic study of the super rich - now back in a new edition. *The Very, Very Rich and How They Got That Way* provides revealing insights into the intriguing world of big money, recounting the spectacular success stories of 15 people who made it to the very, very top. In 1972, Max Gunther invited readers to take a journey with him through a gallery of America's most prominent millionaires. The inhabitants framed here are by no means merely ordinary millionaires, though - the minimum qualifying standard to be considered for inclusion was ownership of assets valued at \$100 million or more (the equivalent of \$650 million today). This classic is now nearly 50 years old but its value endures, since the key steps on the route to wealth do not change with time. These secrets can be learned from, adapted and applied by anyone today.

Grassroots Success-Valora Washington 1995 The first of the National Education Goals calls for every child to be ready to learn when entering kindergarten. Noting that children are more likely to succeed when schools and families are prepared for each other, this book describes the grassroots efforts of The W.K. Kellogg Foundation School Readiness Initiatives to link families, schools, and communities in a variety of settings and populations. After background information on the national education goals, professional practices, and public policies that aim at providing high-quality experiences for young children, Chapter 1 introduces the emergence of the 20 Initiatives and their efforts to translate national aims into daily action. The second and third chapters discuss core strategies to prepare children and schools for each other. Chapter 2 focuses on family-oriented strategies, such as strengthening families, including communities for the children's progress, and promoting cultural competence by using culturally sensitive strategies and materials. Chapter 3 discusses strategies that engage the community, such as building on community assets, assessing community resources, and collaborating with local agencies and programs. In addition, emphasis is placed on working for results, looking for partners, generating publicity, and creating a bigger dream by nurturing local leadership. An appendix contains descriptions of each Initiative, including names of contact persons, the population served, and the nature of the initiatives and their successes. (BAC)

The Summer Slide-Karl Alexander 2016 This book is an authoritative examination of summer learning loss, featuring original contributions by scholars and practitioners at the forefront of the movement to understand—and stem—the “summer slide.” The contributors provide an up-to-date account of what research has to say about summer learning loss, the conditions in low-income children's homes and communities that impede learning over the summer months, and best practices in summer programming with lessons on how to strengthen program evaluations. The authors also show how information on program costs can be combined with student outcome data to inform future planning and establish program cost-effectiveness. This book will help policymakers, school administrators, and teachers in their efforts to close academic achievement gaps and improve outcomes for all students. Book Features: Empirical research on summer learning loss and efforts to counteract it. Original contributions by leading authorities. Practical guidance on best practices for implementing and evaluating strong summer programs. Recommendations for using program evaluations more effectively to inform policy.
